

## **CLAIMS**

1-21. (Cancelled)

22. (Previously Presented) A data communications server system, comprising:

an information network;

means for logging into the information network;

a communications portal resident on a server and accessed over an

information network to present information associated with an

individual implantable medical device patient, comprising:

means for allowing a user to log-in to the communications  
portal;

means for making a user verification;

means for automatically presenting a web page customized

to the individual implantable medical device patient

that includes a display of information relevant to the

implantable medical device implanted in the patient;

means for accessing implantable medical device, patient

medical records, and patient lab records databases

over the information network; and

means for integrating accessible databases through user  
selectable links.

23. (Previously Presented) The data communications server system of claim 22 further comprising a web browser connectable to the communications portal by entering a portal URL.

24. (Previously Presented) The data communications server system of claim 22 wherein the communications portal further comprises a physician welcome interface.

25. (Previously Presented) The data communications server system of claim 24 wherein the physician welcome interface comprises a listing of all implantable medical device patients being treated by a physician.

26. (Previously Presented) The data communications server system of claim 24 wherein the physician welcome interface comprises an email link, a print link, and a product information link.

27. (Previously Presented) The data communications server system of claim 24 wherein the physician welcome interface comprises means for accessing a search engine to locate information on servers accessible to the communications portal.

28. (Previously Presented) The data communications server system of claim 22 further comprising means for accessing back office automation operations comprising patient follow-up scheduling and automated billing of services.

29. (Previously Presented) The data communications server system of claim 22 wherein the means for presenting a customized web page provides for presentation of one or more of a physician web page portal and a patient web page portal, and wherein each of the web page portals comprises personalized content based on user role.
